Nibbler TruTool N 160 Li-Ion battery 10.8 V

The advantages at a glance

- Perfect price / performance ratio in the range of 1,6 mm sheet thickness
- You can rotate the tool through 8 steps of 45°
- You can change dies and punches quickly, without the need for any additional tools
- Compact design and ergonomically shaped handle
- Round punch: For high curve and profile flexibility
- The soft grip minimises vibrations and means you can work without getting tired
- For flat, corrugated and trapezoidal sheets

Nibbler TruTool N 160 Li-Ion battery 10.8 V

How does nibbling work

Nibbling is a cold process without the interference of heat. In comparison to thermal or other mechanical solutions, nibbling doesn't produce waste such as dust, gas or smoke. The principle behind nibbling is cutting multi-layered parts with fast, successive punching strokes. By moving up and down, the punch will nibble a cutout in a sheet.

Nibbler TruTool N 160 Li-Ion battery 10.8 V

Important detail: Rotating punch

TRUMPF's consumable materials generally have a long service life. In the N 160 models, the wear of the punch is reduced by a rotational movement. This allows for regular wear and tear. The result: surprisingly long service life and low operating costs.
