

Offset Models

The Sheetmetal Tradesman's Choice

Midwest Snips® forged blade offset model aviation snips are the world's best! We offer three different blade pattern models and two blade hardness options in this product category as well as two tradesmen sets. These models perform superior to respective model ASME Performance Requirements.

Our offset model aviation snips are "The Sheetmetal Tradesman's Choice" because they are truly the easiest models to use in a variety of sheetmetal cutting applications. The offset blade pattern flows material away from the blades. This allows the snip to move forward without interference when making cuts through long sheets. It also allows the snip to cut tighter curves than other blade pattern models. The left and right blade pattern models cut the tightest curves while the straight blade pattern offers a slightly longer length of cut.

FASTER!

Cuts "Pinch-Thru-Point" & Requires Less Hand Force

Precision cuts completely to blade tip end which reduces cutting strokes and enables complete and accurate trim cuts.

EASIER!

Stays In Adjustment & Flows Material Away From Blades

Blade pivot bolt is threaded into bottom blade keeping blades in adjustment for ease of operation. Offset blade pattern flows material away from blades for a smooth forward cutting action.

SAFER!

Lifts Hand Above Material & Ergonomic Handle Width Opening

Keeps hand safely above sharp edges of material being cut. Reduces muscle stress. Latch keeps blades safely closed when snip is not in use.

Longest Lasting Cutting Edge

Blades are hot drop-forged of molybdenum alloy steel and austemper heat-treated.

Strongest Blades

Hot drop-forged process uses grain structure of steel to produce maximum strength.

Optimum Serrations

Blades serrated 40 serrations per inch grip material without scarring.

Highest Quality Components

Grade 8 blade pivot bolt and heavy-duty double-overwind spring are unconditionally guaranteed!

Compound Leverage

Multiplies handle force to cutting blades by 8 : 1 power ratio.

Strongest Handles

High tensile strength steel will not bend from hand pressure and provides most efficient conversion of hand force to cutting power.

Comfortable Handle Grips

Thick textured Santoprene® grips comfort user's hand and prevent steel handles from wearing through.

FORGED BLADE STANDARD OFFSET MODELS

Standard Offset Models are versatile and easiest to use. They cut a wide range of sheet materials including sheet metal, vinyl, plastic, rubber, screening, canvas, cloth, cardboard, etc.

MW-P6510S Offset Straight Aviation Snip

Cuts straight and wide curves to the left and right. Use in either hand. Bottom blade serrated. Slightly longer blade cut length than left and right models.

MW-P6510L Offset Left Aviation Snip

Cuts straight and tight left curves. Easiest used in right hand. Bottom blade serrated. Meets ASME Standard B107.500-2010(B107.16).

MW-P6510R Offset Right Aviation Snip

Cuts straight and tight right curves. Easiest used in left hand. Bottom blade serrated. Meets ASME Standard B107.500-2010(B107.16).

FORGED BLADE SPECIAL HARDNESS OFFSET MODELS

Special Hardness Offset Models are recommended for cutting extremely hard sheet materials such as stainless steel, inconel, titanium, etc.

MW-SSP6510L Special Hardness Offset Left Aviation Snip

Cuts straight and tight left curves. Use to cut hardened metals. Easiest used in right hand. Bottom blade serrated.

MW-SSP6510R Special Hardness Offset Right Aviation Snip

Cuts straight and tight right curves. Use to cut hardened metals. Easiest used in left hand. Bottom blade serrated.
